Mr. Naor Chezi
General Manager

A.H. Plast Ltd. is one of Israel's leading companies for the production and installation of tanks, pipes and facilities made of fiberglass and plastic. The company utilizes the most advanced technology and engineering levels and with ISO 9001 certification maintains the highest quality standards. A.A.H. Plast's products are used in industry, agriculture, food processing, pharmaceuticals and water systems. The company is a leader and specializes in manufacturing and installing fiberglass and plastic pipes and tanks in desalination plants. As the world's largest desalination facility in Hadera.

Other Important Information
Customers

Among the company's customers are The Israel Electric Corporation, Israel Chemicals, Israel's Ministry of Defense, Mekorot Israel Water Company and Beitman Engineering and the Baran Group. A.A.H. Plast also exports to European Union countries. The company has field teams for installation, operation and maintenance of various sites, who can solve problems and repair defects at the shortest notice.

Fiberglass Department

This department specializes in insulated tanks, es-

Products and Services

The company manufactures fiberglass pipes' accessories in various diameters and water pipes of various heights and diameters. Plastic tanks are produced in volumes up to 250,000 liters. These tanks are manufactured in various thicknesses according to customer requirements and the kind of material to be stored in them. The tanks are environmentally friendly, recyclable and transportable and resist temperatures up to 90 degrees celsius. The plastic tanks can have piping, inlets and outlets added and inside the tank is hermetically sealed.

Ownership

The company is privately owned.

Brief History

Established in 1984 the company has grown rapidly in the past decade.

Financial Data

Sales in 2009 amounted to \$4.5 million.

pecially large piping installations for air and sewage purification and water tanks. The products are appropriate for aggressive chemicals and high temperatures.

Design and Development

This department adapts customer's applications and requirements to technological developments and needs worldwide. The company's products can be found in the most major and complex projects in Israel including the Dead Sea Works/Volkswagen magnesium plant, the Rotem Fertilizer factory and water storage systems in remote settlements.

Plastic Department

This department uses German knowledge and standards. The tanks are manufactured with a system of winding extruded plastic bands around a pre-heated metal cylinder in order to obtain a homogeneous, hermetically sealed tank.
