

CLT - Continuous Line Technology Ltd.

Line of Business

Electrical and Electronic Design, Engineering, Assembly, Testing

Established

1993

Leading Executive

Mr. Yonatan Shiachi
General Manager

Continuous Line Technology, specializes in the design, engineering, assembly and testing of electronic communications systems for commercial, industrial, medical and military applications.

CLT provides development support for:

1. High-voltage power suppliers
2. ATE (Automatic Test Equipment) systems
3. Electrical and electronic systems
4. RF systems

Test engineers receive the characterization of testing requirements drawn up by the development and engineering department. The in-house project managers arrange joint meetings to brainstorm for new solutions. This allows the testing engineers to use their extensive experience to change and improve the testing systems as defined both by the client and the engineering department.

At the ATE stage, the project managers oversee the integrated design and development of the automatic

testing equipment. This ensures a better, more efficient system; based on the accumulated knowledge and expertise in developing the testing systems.

CLT has formed strategic partnerships globally, including, a joint venture with a company in the USA.

Certification

AS9100B, IPC610, IPC620, ISO9001-2000

CLT has served its customers professionally since its incorporation in 1993.

Customers

Applied Materials, IAI, GE, Aeronautics, Tadiran, Elisra

Seeking

- Joint Ventures.
- Strategic Alliances
- Complementary Capabilities

The in-house development, engineering (design) and manufacturing units enable smooth, stable and rapid transition from development to manufacturing with continuous monitoring of changes in product models. There is on-line communication between the manufacturing and development stages and the customer's needs and requests.

Ownership

Private
