

Diskit Technologies Ltd.

Diskit Technologies Ltd. is engaged in precision stamping for metal parts. The company was founded in 1956 and provides solutions for the requirements of advanced technological production in small and large series manufacturing for the automotive, defense, aerospace and high-tech industries.

Technological Services

The company provides costs reduction for products integrating technologies, R&D, engineering support, product design through to supply of the product including the manufacturing file.

Production Infrastructures

The manufacturing department has more than 30 precision stamping centers from 5 tons up to 700 tons.

- Die production department
- Parts processing department
- Welding department, welding of resistance, CO₂ welding, Argon and more
- Mechanical assemblies and electro-mechanical department

Brief History

Diskit Technologies Ltd., founded in 1956, is a high quality vendor of metal stamping parts and multi-material sub-assembled components. Since its establishment, Diskit Technologies Ltd. has developed into a sophisticated company whose know-how, experience and technological capabilities help to strengthen long-term relationships with its customers.

Diskit Technologies Ltd. is a valuable collaborative asset to its customers and the industries in which

they operate. The company's diverse engineering and production resources enable it to be innovative in creating real added-value for customers and their projects. They benefit from a broad range of disciplines and experience developed over our many years of on-going activity for the electrical, automotive, defense, aerospace and high-tech industries and mechanical engineering industrial sectors.

Added Value Services

- Custom tool and die design, manufacture and maintenance
- Collaboration with customers on new product design or upgrading existing design
- Collaboration with customers on new product design or updating existing designs
- Full logistics support
- Troubleshooting and solutions

In addition, we offer these services as well:

- Heat treatments according to the required standards.
- Surface treatment (electro polish, sand blasting, polishing etc.).
- All the coating types according to required standards.
- Electrostatic & wet painting.
- Special packing processes according to required demands.

Reliability and Quality

Reliability, quality punctuality and on-budget are the basics that any customer expects from its vendors. Yet the vital added value asset that Diskit brings to the collaboration is the ethical and professional service support that may begin with the involvement in the initial product design stage throughout the full production process of the products.

Diskit Technologies Ltd. is a state-of-the-art company that is flexibly organized to handle large and small production runs with equal efficiency.

Quality Assurance

Diskit Technologies Ltd. is committed to delivering results on time, in budget and in quality no matter whether the job is simple or complex, small or large, routine or custom work. The company has been awarded ISO 9002-2000 certification, QC/QA documentation (Preparation under way for ISO 14001, TSISO16949 and OSHAS18001 accreditation during 2006).
