Planning

Ditron Precision Ltd. operates a state of the art facility, equipped with the most advanced CNC machining centers and lathes, single spindle, multi-spindle and Swiss-type automatic screw machines.

A team of highly skilled operators is continuously updated on the latest developments relating to advanced production methods and machinery operation, in order to ensure the highest level of productivity and quality.

The implementation of a lean and flexible manufacturing process ensures efficient production and highly reliable on time delivery, regardless of volume. Our facility is geared to the production of superior quality parts requiring a uniformly high degree of dimensional accuracy. The quality level maintained by Ditron Precision Ltd. conforms to the strictest international standards.

The facility has a complete range of auxiliary machine tools for: milling, drilling, thread rolling, broaching, honing, induction heat treatment, centerless and cylindrical grinding. These facilitate the production of a wide range of parts that conform to the most stringent specifications and quality requirements.

Quality Assurance

At Ditron Precision Ltd., reliability and quality is paramount. Quality assurance starts with design and meticulous production planning. Ditron Precision Ltd. conducts extensive testing of raw materials and tooling prior to production runs, while strict quality control is maintained through every step of the manufacturing process.

OEM Manufacturer

Ditron Precision Ltd. is a supplier to major automotive OEMs in the United States and Europe.

Among our clients:

Bosch, Delphi, General Motors, Schaeffler, International Truck & Engine Corp, Volkswagen, Ixetic, Daimler Detroit Diesel.

High Quality Finish

Ditron Precision Ltd. specializes in the production of high volume quality parts, held to extremely high tolerances and requiring high level finishes.

All materials suitable for machining can be handled - from brass and bronze, to high performance alloys. Bars up to 76mm in diameter, 250 mm diameter for chucking, and 650 x 450 x 275mm capacity for milling.

Computerized Control System

Computerized and statistical control systems are consistently applied at each stage of production, with a final check performed just before packaging of the finished part.

International Certifications

Ditron Precision Ltd. is capable of producing complete parts in full compliance with all applicable production and material specifications, accepted international standards and specific customer requirements.

Our facility is certified to ISO 9001:2000, QS9000 and ISO/TS16949 standards.
