

Eilat Port

Eilat port is set on the northern edge of the red sea and constitutes the southern gate of Israel. By being an alternative transportation route to the Suez Canal the port is used as a continental gate between Europe and Asia, Australia and the Far East.

The Israeli government declared Eilat port, a “national strategic asset and a vital enterprise to the city of Eilat, which a national interest exist to keep it operational and to maintain the scope of foreign trade that passes through.”

In light of this ruling the ports importance rises in two main fields:

- a. political – economic: the southern gate to the eastern countries, open to trade and tourism.
- b. security – military: a safe pathway and an alternative to middle eastern ports.

Fields of Operation

The ports’ primary fields of operation are bulk export, and motor vehicle import from the Far East. The port prepares, on regular basis ,new storage areas for imported vehicles and accompanied infrastructure, while strict measures are being held to guaranty speedy and quality service, safety and security. In recent years the port also operates in import of stock from the east and also in fields of containers and passenger ships in the gulf.

Eilat port provides their customers a whole range of services:

- Tying and docking services.
- Supplying accompanied service to the ships (water, garbage disposal, water for the bilges...).
- Storage, loading and unloading cargo.
- Infrastructure and quality service for passenger ships.

- Unique storage facilities: bulk storage, stair-cases for vehicle storage.
- An office plaza at the rear of the port designated for clients.

Along side the development boom, the port company operates in establishing strict safety regulations for their employees and who ever uses port services, upgrading infrastructure and operational equipment, developing and setting up new and advanced computerized systems, improving the readiness of security and meanwhile preserving the environment and the ecological balance in the gulf of Eilat.

Focus On Customer Service

Satisfaction of customers stands as head priority. Eilat Port Company, management and dedicated and skilled staff of employees, maintain close contact with customers and provide required port services in a speedy and efficient manner.

Advanced equipment and dedicated professional personal help to shorten waiting times, optimizing and speeding care and service in each field. All this, while conducting a close dialogue with reference to individual customers’ unique needs.

Technological Services

The Port of Eilat set the technological development and teleprocessing as its’ main goal and is working to bringing it to the most advanced level. ERP Successfully a new modern ERP system was assimilated in this setting. The port is preparing a broad scope project which will replace all the operating systems, into one integrative novel system.

The Environment

The Port of Eilat set an environmental preservation goal by investing in many facilities and equipment in order to help preserve the environment and the bay. New strict work regulations were set to this need and environmental awareness information was explained among employees.

Great efforts have been invested in modifying the bulk facility to high environmental standards, amongst the actions taken: Sealing warehouses, purchasing a smart loader, constant cleaning of the storage and dock and basing air monitoring stations providing data in real time on the level of dust in the air.
