

Gasngo™

Line of Business
Automated Vehicle
Identification

Established
2005

Leading Executives
Mr. Sagi Cohen
Mr. Uzi Fried

Gasngo™ was established in order to provide advanced solutions for Automatic Vehicle Identification (AVI) and fleet management.

It is led veterans of the Israeli Oil Retail and automotive industry with extensive experience in international markets. The firm's R&D team consists of highly skilled professionals with specific expertise in RFID and Wireless Communication technologies. Petrateg management has a long and extensive experience in structuring and operating Automated Vehicle Identification projects, including relevant technological, operational and financial issues, including all aspects of technol-

ogy implementation, business processes, billing, clearing, customer care and operational management of AVI operations.

Automatic Vehicle Identification is defined as offering the ability to create an unbreakable identification bond between vehicles and billing information. The system enables the driver to refuel without having to use a credit card or perform a cash transaction. At the same time, the system ensures that the fuel is actually dispensed into the designated vehicle's tank, thus eliminating driver fraud and reducing cost to the fleet owner.

AVI systems offer benefits to users at all levels.

- Benefits to Petrol Companies include:
 - Exclusive customer base: captive market, unlike private.
 - Credit risk control-minimal credit exposure in dealer management.
 - Technological edge and renovation in existing stations.
 - Creating a new, additional income source, from vehicle subscription fees.
- Benefits to Petrol Station Owners include:
 - Less cash transactions translate to less employee theft and simplified POS operation.
 - Prepaid transaction mode without inconveniencing the customer.
 - Simplified operations: resources relocated towards better service, lowering labor costs.
- Benefits to Business Customers:
 - Elimination of petrol theft in fleet vehicles.
 - Control over the company's petrol expenses and a flow of odometer data.
 - Simplifying and overseeing operational processes for vehicle fleets.
 - Convenient and speedy service.

Gasngo™ unique solution is a plug and play, off the shelf Automatic Vehicle Identification system. It connects to the stations infrastructure, which continues to control all fuel dispensing, monetary transactions, etc., as it did prior to the installation of the gasngo™ system. The Gasngo™ system allows quick and easy installation of station infrastructure (1-2 hours per station). The sticker design of the vehicle tag offers ease of installation (30 second up to up to a few minutes per vehicle). The RFID tag acts as the vehicle's ID. The nozzle readers, installed on the equipped dispensers' nozzles, are able to read the RFID tags and identify them by communicating with the other system components. Once an authorized vehicle is identified, the pump will open and allow refueling. Once the nozzle is pulled out, pumping will stop. In case a driver inserts the nozzle to an unauthorized vehicle, fuel will not be dispensed.

Gasngo™ is offering it commercial partners a spectrum of services and products, ranging from AVI equipment, all the way to establishing service companies, offering AVI services to end customers.
