

## ISCAR Ltd.

### Line of Business

Metal Cutting Tools

### Established

1952

### Leading Executives

Mr. Stef Wertheimer  
Founder and Honorary  
Chairman of the Board IMC

Mr. Eitan Wertheimer  
Chairman of the Board IMC

Mr. Jacob Harpaz  
President and CEO IMC

In May of 2006 the Berkshire Hathaway company purchased 80% of the IMC group, of which ISCAR is the largest company.

ISCAR Ltd. is one of the world's leading manufacturers and a full-line supplier of fine, precision metalworking tools. Its unique and innovative cutting tools cover most applications, including cut-off, face grooving and other turning applications, milling, drilling, hole making, threading and operations requiring solid carbide tools. Iscar's marketing activities can be found in over 50 countries and in all major manufacturing centers throughout the world.

The manufacturing facilities are divided by function and purpose. Separate buildings produce and press carbide powders. There are additional factories specializing in tools for the automotive and aerospace industries. Milling products and toolholders are produced in separate facilities. ISCAR maintains manufacturing facilities for special tools and inserts in the Americas, Central and Eastern Europe, Asia, Turkey and Israel. The company has computerized regional warehouses in North America, Europe and Asia.

ISCAR began with the now famous SELF-GRIP and CUT-GRIP lines for turning, cut-off and turn-groove applications. Its HELIMILL line, featuring an indexable helical cutting edge, has become an industry standard for milling applications. CHAMDRILL revolutionized drilling applications

by completely eliminating setup time for indexing. MULTI-MASTER is a line of threaded solid carbide heads for machining deep cavities, commonly used in the die and mold industries.

The company has also developed specialty lines of tools for specific industries, such as dies & molds, automotive, aerospace, miniature, medical and others.

ISCAR and quality are synonymous. Their business philosophy is to assist customers to reduce their manufacturing costs through cost effective, high quality production and bottleneck solutions.

The company's entire central manufacturing and marketing facilities are certified in accordance with ISO QS-9000 and ISO 9001 standards. ISCAR is also certified under OHSAS 18001 for its employee health and safety systems and ISO 14001 for its environmental management systems.

ISCAR's advanced research & development has resulted in market introductions of hundreds of new products and product variations each year. They devote 10% of their total resources to R&D activities.

Over half of the company's sales are from products developed within the last five years.

ISCAR's success and growth continue as a result of innovation and a desire to provide customers with the very latest, most efficient metal cutting technology in the world.
