### **Intelligence Surveillance, Reconnaissance Systems (ISR)**

IAI develops and manufactures ISR systems for space, air, land and sea applications, providing decision support to all levels of command. The company provides complete functional solutions using various platforms with on-board advanced intelligence-gathering systems such as Signal Intelligence systems (SIGINT), Image Intelligence systems (IMINT), Synthetic Aperture Radar (SAR), day & night EO/IR systems and Network Centric Operation (NCO) systems which detect and track both stationary and moving targets in real time and under all weather conditions.

### **Military Aircraft & Helicopter Upgrades**

IAI's projects for both Eastern and Western defense platforms ensure defense fleets are up to the most severe challenges with advanced avionics, EW suites, radars, glass cockpits, weapon delivery, navigations systems, data links and more. The company also specializes in training, simulators and mission planning/debriefing systems.

### **Homeland Security systems/Urban Warfare**

With an extensive range of integrated solutions incorporating C4I systems, sensors, radars, electro-optical payloads and platforms, operational in some of the world's hottest conflict areas, IAI's airborne, ground-based and naval sensors provide constant surveillance and protection of sensitive installations, borders and coastlines. In the civil aviation sector, IAI offers the field-proven "Flight Guard" anti-missile self-defense system exhibiting the ultimate solution for terror-free flight operations. Specialized platforms, including aerostat, unmanned platforms and patrol vehicles are also integrated through a comprehensive information network to provide the highest security level under the most affordable conditions.

### **Ground Systems**

IAI's next generation ground systems include Advanced Armored Fighting Vehicles integrated with electronic, missile and reconnaissance systems. The company also offers Network-Centric Laser-Guided Warfare Solutions, mine detection and demolition equipment, ground surveillance radars, and intelligence systems to support modern land warfare and paramilitary operations.

### **Commercial Aircraft**

IAI's design, engineering and manufacturing capabilities are demonstrated in highly cost-effective, intercontinental range, super-midsize business jet. IAI also develops and produces, for major international OEMs, primary aerostructure assemblies, as well as landing gear, servo-control and actuator systems.
