MDT Protective Industries Ltd. is a leader in battlefield proven state-of-the-art lightweight armoring of military and commercial vehicles. It is a key supplier of armored military vehicles to the Israel Defense Force (IDF). MDT manufactures the David, a military armored patrol vehicle, and has recently announced its new military vehicle – the Tiger.

Battlefield Proven

MDT uses technology that has been continuously upgraded using extensive battlefield experience accumulated by the Israeli Defense Force. It has introduced advanced new engineering techniques, coupled with sophisticated, lightweight materials. Working closely with our customers, we tailor and custom design armoring solutions that meet specific requirements. MDT meets and surpasses all international standards, and is a qualified supplier to the Israeli Defense Force, leading businesses and government agencies.

An MDT armored David after suicide attack - no casualties in vehicle

on a commercial off-the-shelf Dodge RAM 5500 platform, the MDT Tiger is a cost effective, highly armored, Light Protected, All Terrain Vehicle for a crew of 6-9. It is mine and blast protected, with various add-on armor options, including reactive armor. Its 5 doors and a roof hatch offer easy loading and unloading of warriors and equipment. The wide and spacious cabin, with its large payload capacity can be tailored to many missions. A powerful Cummins 350 HP diesel engine, large wheels, and a 127" wheel base offer exceptional all terrain capabilities. The advanced suspension system ensures a comfortable ride for the crew. The MDT Tiger LPV was designed to be cost effective. The COTS Dodge platform ensures widespread support and cost effective maintenance. The unique encapsulated cabin allows easy access to all components. The capsule can easily be removed and remounted, allowing its installation on a new platform, increasing its life and ensuring low life cycle cost.

The David

A light armored personnel carrier for combat missions designed for the urban low intensity conflict. It is based on the Land Rover Heavy Duty Defender platform and with a small footprint (considerably shorter, lighter and narrower than the up-armored Humvee), it is ideal for operating in urban and other densely populated areas.

The David has been in service with the IDF since 2004, and has become the standard patrol and reconnaissance vehicle, with hundreds deployed in Gaza and the West Bank, and along Israel's border with Lebanon.

The Tiger

MDT has recently developed the Tiger, Based

Highlights
