

## Mer Group

**M**er Group, a global system integrator since 1982, delivers complete turnkey solutions for: Wireless Networks; Security and Surveillance; Broadband Infrastructure; Customized Military Systems; Communications and Monitoring Mobile Systems; Environmental Monitoring and Renewable Energy. The company's impressive corporate turnover, coupled with financial stability and steady growth, are the key to Mer Group success. Our strong global presence combines the in-depth regional knowledge of our local partners with the corporate multidisciplinary expertise, providing measurable benefits to our customers. Mer Group, traded as C. Mer Industries Ltd. on the

TASE (CMER) has over 1000 highly-skilled employees worldwide. It is the holding company with three autonomous divisions, each headed by a company with subsidiaries in markets and manufacturing companies.

### Wireless Networks

Operating through Mer Telecom Ltd., Mer Group provides end-to-end Wireless Infrastructure Turnkey Solutions - from network planning, site design, provision of towers, to site construction, equipment installation, network optimization and maintenance. Our solutions are a combination of cost effectiveness, short lead times, and

advanced engineering techniques - delivered with a strong commitment to client satisfaction. With a highly developed logistics chain and advanced tower manufacturing facilities, our solutions are flexible, scalable and cost effective.

### Security and Surveillance

Mer Security & Communications Systems Ltd. (Mer Systems) provides all aspects of security dealing with some of the world's most vulnerable security areas. Extensive know-how, decades of experience in project management and expert in-house skills supported by multidisciplinary engineering and software teams, make Mer Systems perfectly qualified to provide a variety of turnkey solutions from project methodology (security surveys, risk and/or threat analysis, concept and system design, integration and installa-

tion, resource and optimization, training, documentation and integrated logistic support) to core project requirements including sub-systems integration. Based on leading-edge technology, our systems are responsive, robust and fully scalable for premises of any size. Mer Systems' experts provide complete tailor-made services from the design to the implementation stage and have pioneered outstanding security systems for the busiest international sea and airports, events including the 2004 Athens Olympic Games, high-risk cities, sensitive national borders, strategic sites and critical infrastructures.

### Broadband

Operating through Rotal.com, Mer Group provides a diverse range of turnkey broadband, fiber-optics and networking solutions and services. The company provides cost effective, scalable and reliable fiber optic and networking systems from the initial mapping stage to the final construction, testing and maintenance stages. Based on a wealth of expertise, Rotal's innovative and customized solutions support diverse networks, making it the ideal business partner for flexible and fast-growing companies. Solutions: FTTx & RFoG networks, xDSL, CATV, IPTV, IP telephony, Wireless LAN, Microwave Links, Video over IP, Data Communications, Data Security.

### Other Activities

**Defense:** TechMer Ltd, an industry leader in customized, multimedia turn-key solutions for military and civilian applications, specializes in custom, DSP-based audio/visual applications.

**Security:** Athena GS3 Security Implementations Ltd. (Athena) was founded by current Chairman Shabtai Shavit, the former head of the Israeli Mossad (1989-1996). Athena is a leading security integrator protecting individuals, corporations, and institutions around the world from various threats, regardless of source or motivation.

**Environmental Monitoring:** Mer Group provides comprehensive and professional environmental monitoring systems for civil and military markets.

**Clean Technologies:** Striving for the climate change mitigation, Mer Group aims to provide project management and implementation, including renewable energy equipment installation and start up, civil works, interconnections (at the wind/solar farm and grid) as well as operational services to clean technology companies and energy providers.
