

Mottech Water Management Ltd.

Line of Business

Water Control Solutions

Established

1988

Leading Executives

Mr. David Shani
CEO

Mr. Yair Zonensein
VP Marketing

Mottech, a Motorola master distributor and system integrator, provides advanced water control solutions based on **Motorola's IRRInet** state-of-the-art control and communication technologies and product lines. Mottech, headquartered in Israel and part of the Gaon Agro Group, distributes its unique solutions through a global network of local dealers and representatives in Europe, Asia Pacific, Latin America, Africa and the Middle East.

Mottech utilizes over 20 years of experience to provide its customers with control and management systems which ensure constant, reliable and accurate water usage, while reducing operational, maintenance and energy costs.

Mottech products and solutions are designed to conserve water and energy, enable efficient and simple installation and usage and engineered to withstand harsh environmental conditions. Mottech ensures years of dependable operation while meeting Motorola's exacting standards. Mottech's strategy is in building long-term partnerships with its customers. With their support, Mottech aims to maximize the potential of its traditional business – through a combination of enhanced quality of service, creative marketing, innovative pricing and cost efficiency – while maximizing return on customers' water control investments.

Mottech activities are focused in the following market segments:

- Agricultural Irrigation
- Turf & Landscape Irrigation
- Rural Water Distribution
- Municipal Water
- Unique Water and Irrigation Control Projects

Mottech General Capabilities:

- Selling and marketing Motorola's IRRInet products worldwide
- Global Pre Sale & Post Sale support
- Design of communication network
- Design of water and irrigation control systems
- Integration and implementation
- Commissioning
- Trainings and seminars
- Real -time & online Service

In order to maintain global leadership in the water control markets, Mottech and Motorola constantly develop new products and integrated system solutions based on a forward-looking strategy coupled with back-compatibility with previous hardware and software versions.

The **IMS-IRRInet System** consists of a main PC workstation including ICC and IMS software, with IRRInet FIU (functioning as a communication gateway), IRRInet field controllers, and various RTU's operating the remote I/Os.

Reliable two-way communication and feedback between the system components can be undertaken via a variety of options including radio communication, wireless, landline, cellular, satellite, fibre optics, or the Internet.

Seeking: International distribution.
