

## Polyram

Offering plastic compounds for injection molding to the leading Automotive manufacturers and also to many TIR-1 suppliers of this industry, Polyram is a supplier of raw materials for production of structural plastic parts, under the hood applications and in the cockpit parts in the car industry.

Polyram is Israel's leading manufacturer of engineering thermoplastic compounds for the automotive, electrical, irrigation, D.I.Y.P and construction industries. Established in 1986, Polyram has earned a reputation as a reliable manufacturer able to meet every customer's specific need .

Polyram supplies both standard and customized thermoplastics in combinations of glass fibers, glass beads, and mineral fillers. The compounds

are flame retardant, impact modified, heat stabilized, hydrolysis resistant, and UV stabilized, with a number of other modifications available upon request.

The company's R&D department brings to the market special, unique polymer compounds and provides creative solutions to customers' requests. Polyram conforms to the highest quality control standards such as ISO/TS16949, the internationally recognized standard of the automotive industry; NSF-61 & WRAS drinking water standards; and UL94 flammability standard.

Polyram is an independent, public company located in Ram-On, a village 20 minutes from Nazareth. The company's products are offered worldwide.
