

Spetrotec Ltd.

Line of Business
Telematics

Established
1985

Leading Executive
Mr. Menachem Klachkin
CEO

Spetrotec Ltd. established in 1985, specializing in the development, design and manufacturing of advanced vehicles high security systems, GPS real time tracking and fleet management systems.

The company's three main fields of expertise are:

1. High security automobile systems – the company's traditional field of expertise. These systems are made from the best hardware components, and are known for their innovation and high quality standard. Our security systems are preferred and approved by most insurance companies in Israel and world-wide.
2. Fleet Management Solution and AVL (Automatic Vehicle Location System), comprising GPS/GSM (GPRS and SMS) hardware and control center software.

MTS™ B

STU™

3. OEM Products - We fully cooperate with our clients and offer development and production services on demand. Due to their extensive experience, Spetrotec's highly trained engineers and technicians can bring any product from demand to production in a short period of time.

Main Products

STU™

- The STU™ is the ultimate GPS tracking, security, fleet management and monitoring device
- CANBUS capability
- Built-in alarm system
- Driver behaviour solution
- Driver ID
- Can be integrated with Spetrotec accessories such as Remote controls, Genie Card, and whole range of Spetrotec sensors
- Built-in voice capability
- The STU™ can be provided with up to 4 different GSM modems

- Support more GSM networks – e.g. UMTS, HSDPA.

MTS™

The MTS™ is a compact, extremely user-friendly high performance GPS Surveillance and tracking device. It easily mounts on any vehicle, boat, motorbike or any other moving object that needs accurate and reliable real time location tracking

- 4 inputs; 2 outputs
- Waterproof housing
- External and waterproof GPS module
- Enhanced GSM internal antenna
- Enhanced processing power and larger storage volume
- Improved SNET communication capabilities which enable it to connect to all Spetrotec accessories
- Built-in accelerometer for extended security, driver behaviour functionality and accident monitoring.

MTS™ - Basic Security

Along with our Meteor Immobilizer, 2 cut units and the panic button the system will functioned not just as basic AVL, but also as anti-theft, E-call and B-call solution.

MTS™ - Ultimate Security Package

The Falcon™ with the MTS™ is the ultimate full-featured vehicle security system with convenience, safety and CANBUS capabilities that will adapt to any vehicle. The system can be interfaced with the MTS™ in order to provide the ultimate vehicle protection.

MTS™ - Motorcycle Tracking and Security

Along with our motorbike accident sensor, the solution which offered will provide the ultimate real time tracking and security for motorbikes. With low power consumption, tow alert and motion sensor, IGN status and main power alert the Motorbike and driver are fully safe and secure.

MTS™ - Driver Behavior / Safety Package

Along with Spetrotec unique external sensors the system will offer Driver Behavior real time monitoring or real time accident monitoring. The sensor can detect the angle of the impact and the G force of the impact and transmit it on real time to the control center and alert on SMS.
