TEFEN was founded in 1970 and is owned by Kibbutz Nasholim. The company specializes in research, development and manufacturing of the MixRite, a water driven proportioning injector for introducing additives into a water line for irrigation, medication and vaccination and industrial processes.

MixRite

Tefen markets its water injectors worldwide under the MixRite brand name. The MixRite line of injectors includes water driven proportioning dosing injectors for maximum flow rate of 25M³, with 0.2%-10% dosing rate. Production method is injection molding and extrusion. The company's major line

of products includes: Fittings for the pneumatic, automation and irrigation industries, Water driven dosing injector / medicator, tubing, air blow guns and spray guns.

Our company exports over 70% of its products, and our customers are located all over the globe.

R&D

Tefen's Research & Development department is up-to-date with the latest technology innovations and has many years of experience in plastic technology, ensuring the customers quick and sound solutions. Tefen is ISO 9001:2000 certified, and our quality control department is taking an important part in the production process in order to

ensure that the product will be as the customers required.

Mission

Tefen's mission is to be among the world leaders in the Fittings and Water-driven Injectors market and to supply our clients with products and application solutions based on our wide range of products in order to allow them to be ahead of the competition in today's marketplace. A company changing everyday to provide the latest products and solutions. Tefen strives to provide quick response to customers' demands without compromising product quality.
