

Z.D.F. Ltd.

Leading Executive

David Mizrah
Business Development

Established

1993

Area of Activity

Plastic injection for precise technical products and molding strips

Z.D.F. Ltd. specializes in plastic injection and insert-molding technologies. The company manufactures accurate injected plastic products for electronics factories that produce advanced high-tech products, as well basic plastic products for daily use.

Medical Devices

In recent years, Z.D.F. has developed services for producing precise technical medical devices and parts, for home care uses and for hospital wards. The company has the ability to develop from initial concept through designing, prototype building, all the way to full-scale production.

The company's main specialty is in the dual stage injection method: high accuracy level insert. Z.D.F. specializes over-mold on metal and hard materials and plastics.

Factory

Z.D.F.'s factory was established in 1993 in the Upper Tiberias industrial zone.

The company has 70 employees working three shifts on the production lines. In addition to production, the company has an experienced sales and marketing staff, assembly line, and quality control department.

Quality Assurance

The company's quality control system follows the product in each production stage, in order to assure high quality standards

Z.D.F.'s factory has been ISO 9001:2000 qualified by the Israeli Standards Institution since 1995.

Equipment

The company has advanced injection machines:

ARBURG Germany, Series C&M&S, Sandreto with closing power of 25 ton till 800 tons.

Customers

Galtronics (Cellular antennas), Aquatron (swimming pool robots), Dan Sprinklers (agriculture equipments), Stanley (workshop equipment), Kapro (industrial tools), Reshef Ind., Bell.

Business Activities

Products from development by skilled substance engineers, machinery, design, managed by technologists with creative vision.

Organizational structure enables the company to implement creative technological solutions according to customer needs electronics, medicine, food and more.

Customer Support

Customer support spans: building model, construction pattern, finished product, high quality control, and "on line" service.

Knowledge and experience in plastic material injections for various technical substances like: P.C., PBT, A.S.A, A.B.S, P.V.C, P.P., Polyurethanes, Nylons with fibrous glass and more...

Special Adaptations

The company's skilled engineers can adapt substances of required plastics to special requirements of new products, according to international standards.

Z.D.F. offers new technological and added value products, mainly medical devices. The company can produce small high-tech series and can produce temporary aluminum molds, and hard mold tempered metals for all scale series production.

Our company is in continuous progression and prospect to enter to new investments, to development broad marketing and new molds development. We offer our ability to develop and produce varied plastic substance of any product as per customer demand, in the machinery and the equipment that exist, in competitive prices.

We are interested to satisfied customer needs from medicine area that believes in the progressive development.

We will be grateful to provide any additional information needed, in order to promote a cooperation business.
