A KOLogic – World leading traceability software for food safety and food security.

AKOL is a leading software house in Israel that provides to the agricultural sector comprehensive computer-based and communications solutions.

Our main platform is “AKOLogic” - The first “Agricultural Cloud” in the world, **based on Microsoft Cloud “Azure”**, using a SAAS – Software as a Service model.

The system allows monitoring the growth process from the field to the supermarket - **Full traceability**.

7. Allowing the consumer in the supermarket to know where the vegetable grows and what materials used - **Transparency and Information Sharing**

8. Working with international entities. The system fully supports all languages. The system is translated into Chinese - **Multi Language**

For more information attached a link to our web site www.akol4u.com

The company has extensive experience in setting up monitoring and control systems for agricultural organizations and countries that allow enhancement and management of growing fresh produce.

AKOL Profile

AKOL is the leading entrepreneurial software house in Israel, providing the agricultural sector with comprehensive computer-based and communications supported solutions to meet its needs.

AKOL's IT solutions help farmers across the different sectors manage their resources, providing them with real-time information, control and assisting them in conducting future planning.

AKOL's major advantage lies in its specialization in the agricultural sector; its in-depth acquaintance with the needs and the way things work in this unique sector; the experience AKOL has accumulated over two decades; its ability to utilize advanced technologies, including integration of farm data from numerous sources; and its ability to create focused and professional presentations to the decision-makers.

Since its founding in 1978, AKOL has pioneered the integration of IT systems in the agricultural sector and built computer and IT solutions that have won it renown in Israel and around the world.

By using our monitoring and control system you can active:

1. Immediate improvement in the quality of field crops - **Food Safety**
2. A significant increase in quantities of field crops - **Food Security**
3. Prediction of pests and disease treatment - **Plant Protection**
4. Considerable savings in expenses and proper distribution of resources – **Efficiency**
5. Using growth protocol (known) and international regulatory compliance - **Global Gap**
6. Implementation methodologies and efficiency processes in agriculture sector (including using agricultural sensors and devices) – **Innovation**
