As the world's #1 wireless hauling specialist, Ceragon Networks ensures that mobile and fixed-line carriers, as well as private network operators, achieve the transmission capacity to deliver the voice and premium data services on which we all rely.

Affordable, High-Capacity Networks Everywhere

From telecommunications operators to mobile service providers, from public safety to offshore operations, from energy to distance learning, in today's interconnected world, everyone needs network capacity to provide the latest services, expand into new markets and meet the rapidly growing communication demands of people and devices. Ceragon's wireless communication solutions eliminate network bottlenecks with cost-effective, high-capacity and future-proof hauling while boosting network performance and services. Our solutions support all wireless hauling technologies, delivering more capacity over longer distances under any given deployment scenario. Customers depend on our expertise and partnering approach to provide wireless backhaul and fronthaul solutions that meet today's needs while guaranteeing a comfortable and cost-effective path to future requirements.

A Culture of Innovation

Our commitment to industry leadership focuses us on the development of generation after generation of innovative solutions for our customers, based on in-house chipsets and vertical integration from chip-sets to complete systems – delivering the highest performance in the industry. We take pride in the many industry-advancing achievements we've introduced to the market and the advantages they provide to our customers. Through our culture of innovation, we have been able to develop solutions that respond to our customers' current and future needs – cost effective, with more capacity, better reliability, lower TCO and smoother modernization to advanced, high-capacity packet technology, 4G/LTE-A and SDN.

FibeAir® IP-20

Released in 2013, FibeAir® IP-20 is the industry's most advanced wireless product series. It integrates leading networking functionality with the

most advanced technologies creating a superior wireless transport solution for every deployment. FibeAir IP-20 solutions operate in licensed and license-exempt bands, including the latest E-band and V-band solutions for small cell backhaul, fronthaul, point-to-multi-point and other scenarios. They are SDN-ready with programmable network processors and a unified operating system. IP-20 solutions may be implemented outdoors, indoors and in split-mount configurations, offering the greatest variety of cost-effective answers to any sort of deployment challenge. Operations, Administration and Maintenance (OA&M) tools coupled with a full suite of network and element management systems (NMS and EMS) simplify network provisioning and monitoring, reducing operators' TCO and enabling them to meet the most stringent service-level requirements.

The Ideal Partner

With decades of proven field experience, Ceragon has the stability, resources, installed base and global reach of a big supplier, and the flexibility, agility and acute responsiveness of a specialist. We are committed to bringing breakthrough technology with global experience and expertise to our customers.

Worldwide Sales and Support

Ceragon's solutions are effectively deployed throughout a customer base of over 430 mobile service providers and hundreds of private networks in over 130 countries. Ceragon maintains sales offices throughout North and South America, Europe, Asia, Africa and the Middle East. Partnerships with leading distributors, VARs and system integrators around the world provide an active indirect channel.

Ownership

Ceragon is a public company traded on NASDAQ (Ticker: CRNT).
