Leading Executive

Mr. Shmuel Melman
Founder, Board Director
and CEO

The Crow Group designs and manufactures since 1980 advanced security solutions for the worldwide security and the home automation markets.

The Crow Group provides innovative and creative solutions for residential and commercial applications with an extensive range of smart wireless and hybrid panels and a broad portfolio of indoor and outdoor detectors, DECT-ULE and ZigBee based peripherals and devices to create smart connected homes.

Our products are commercialized worldwide by a dynamic network of distributors and sales offices to professional installers and central monitoring stations. Continuous innovation at Crow is ensured by en-

By using latest wireless technology, combined with Serenity Connect™ mobile app which functions as an online control panel, Crow enables each Serenity™ Panel owner to keep in touch with his home and family, wherever he is.

Crow's Smart app allows to turn Serenity™ home alarm on and off via any smart phone, control lights and other electronic devices remotely, get messages and pictures when your children come home, read indoor temperature or be warned if the fire detector goes off.

Crow Production Facilities

Crow has two production facilities in Israel, both equipped with the most advanced production

gineers dedicated to the integration of the latest technologies including ongoing communication challenges, interoperability and integration of automation, management systems, wireless security products and Cloud services.

We proudly combine creativity and expertise to create world-class products and services with added value for our customers at maximum cost effectiveness while complying with the highest standards of quality, technology, reliability as well as support and fast delivery.

Solutions and Technologies

Crow offers new advanced home alarms systems as well as connected devices for the smart home - all controlled through Serenity Connect™ mobile app - and welcome you to Crow's connected smart home and to Crow Cloud™.

technologies. Electronic production facility is located in Afula and the plastic injection factory is located in Alon Tavor.

The electronic production facility in Afula operates 8 SMT lines based on Yamaha high volume pick & place machines and a variety of inspection equipment for optical, X-Ray, electrical and functional verification. The verification equipment is integrated in the assembly lines to insure full traceability and highest reliability.

The plastic injection facility in Alon Tavor has 15 injection centers enabling the support of high volume production of security and home automation products at top quality.

Being an expert in security and control technologies allows Crow to comply with customers' requirements of today and tomorrow.
