

Diskit Technologies Ltd.

Diskit Technologies Ltd. specializes in precision stamping for metal parts. The company was founded in 1956 and provides solutions for the manufacturing of advanced technological production in small series for the automotive, defense, aerospace and high-tech industries.

Since its establishment, Diskit Technologies has developed into a sophisticated company whose know-how, experience and technological capabilities help to strengthen the long-term relationships with its customers. Diskit Technologies is a valuable collaborative asset to its customers and the industries in which they operate. The company's diverse engineering and production resources enable it to be innovative in creating significant added-value for customers and their projects. Our customers benefit from a broad range of disciplines and experience developed over our many years of on-going activity for the electrical, automobile, agricultural and mechanical engineering industrial sectors.

Added Value Services

- Custom tool and die design, manufacture and maintenance
- Collaboration with customers on new product design or upgrading existing design
- Full logistics support
- Troubleshooting and solutions

Reliability and Quality

Reliability, quality, punctuality and on-budget are the basics that any customer expects from its vendors. The vital added value asset that Diskit Technologies brings to the collaboration is the ethical and professional service support that begins from involvement in the initial product design stage and through to the full production of the products. Diskit Technologies is a state of the art company that is flexibly organized to handle large and small production runs with equal efficiency.

Quality Assurance

- Diskit Technologies is committed to delivering quality results on time and on budget, whether the job is simple or complex, small or large, routine or custom work. The company has ISO 9001-2000 certification.
- Process & documentation.
 - Advanced Product Quality Planning & Control Plan
 - Cpk & CP
 - PPAP Process
 - D/PFEA
 - Gage Repeatability and Reproducibility - R&R
 - Traceability

Technological Services

The company provides cost reduction for products integration technologies, R&D, engineering support, product design up to the final supply of the product including the manufacturing file.

Production Infrastructures

- 3D laser cutting machine
- Electronic packaging
- 2D leaser cutting
- Break Press machines
- CNC punching centers
- CNC Machining center, turning & milling
- Mechanical & electromechanical assembly and sub assembly
- Precision stamping centers from 1 tons up to 600 tons
- Fine Blanking
- Die production department
- Parts processing department
- Welding department, welding resisting, CO₂, Argon
- Wet painting process
- Silk printing process

Brief History

Diskit Technologies. Founded in 1956, is a high quality vendor of metal stamping parts and multi-
