CTO

Since 1988, E-Drive Technology has been a manufacturer and provider of smart Fleet Management, Fuel Management and Telematics solutions for the automotive industry, serving both the domestic and international markets. E-Drive Technology has its headquarters in Israel, the world's best location for R&D and innovation, as well as a subsidiary in the U.S.A. The company is fully owned by Road-Track Holdings, which provides telematics, fleet management, security and recovery systems and services to large automotive manufacturers in various countries in Latin America. E-Drive Technology develops hardware, firmware, and management software solutions in an integrated development environment. EDT products adhere to the highest automotive quality specifications and incorporate the finest electronic components, to ensure reliability and cost savings to its clients.

• Driving/Driver profile:

Speed logging and alerts, acceleration/deceleration, idle time, route, geo-fencing, online tracking and checkpoints

WorldFleetLog, EDT's Web application provides fleet managers with a complete Fleet Management System with online monitoring and control capabilities from any place in the world.

Using dozens of built in reports our customers are able to monitor driver behavior and authorization and to generate substantial savings of up to 30% of overall fuel and maintenance costs.

E-Drive Technology seeks to establish business relations with companies in the following fields:

- Automotive manufacturers: To install EDT products in commercial and private vehicle production lines.
- Automotive importers and electronics integrators: To install EDT product as a part of after-market vehicle features
- Cellular operators: With EDT products, cellular operators can expand their business to commercial fleets, government organizations, and public and private companies.

Among E-Drive Technology customers are General Motors, the United Nations, police departments, military forces, post authorities, Coca Cola, KLM, electric companies.

Our systems provide an abundance of information and versatile features:

• Security and Safety:

Driver identification and authorization, black box for accidents analysis, panic button, remote immobilizations, remote tracking, online communication and services, parking alert, remote door lock/unlock.
