

Eilat Port

Eilat port is set on the northern edge of the red sea and constitutes the southern gate of Israel. By being an alternative transportation route to the Suez Canal, the port is used as a continental gate between Europe and Asia, Australia and the Far East.

The Israeli government declared Eilat port, "a national strategic asset and a vital enterprise to the city of Eilat, which a national interest exist to keep

Eilat port provides their customers a whole range of services:

- Tying and docking services.
- Supplying accompanied service to the ships (water, garbage disposal, water for the bilges...).
- Storage, loading and unloading cargo.
- Infrastructure and service for passenger ships.
- Unique storage facilities: bulk storage, staircases for vehicle storage.
- An office plaza at the rear of the port designed for clients.

Alongside the development boom, the port company operates in establishing strict safety regulations for their employees and whoever uses port services, upgrading infrastructure and operational equipment, developing and setting up new and advanced computerized systems, improving the readiness of security and meanwhile preserving the environment and the ecological balance in the gulf of Eilat.

Focus On Customer Service

Satisfaction of customers stands as head priority. Eilat Port Company, dedicated and skilled staff of employees and management, maintain close contact with customers and provide required port services in a speedy and efficient manner. Advanced equipment and dedicated professional personal help to shorten waiting times, optimizing and speeding care and service in each field. All this, while conducting a close dialogue with reference to individual customers' unique needs.

Technological Services

The Port of Eilat set the technological development and teleprocessing as its' main goal and is working to bringing it to the most advanced level. A new modern ERP system and a new operating systems, was assimilated in this setting into one integrative novel system.

The Environment

The Port of Eilat set an environmental preservation goal by investing in many facilities and equipment in order to help preserve the environment and the bay. New strict work regulations were set to this need and great efforts have been invested in modifying the bulk facility to high environmental standards.

it operational and to maintain the scope of foreign trade that passes through." One example for that is the order issued by the government to import all vehicles from the Far East through Eilat Port.

In light of this ruling the ports importance rises in two main fields:

- Political – Economic:** the southern gate to the eastern countries, open to trade and tourism
- Security – Military:** a safe pathway and an alternative to middle eastern ports.

The port was privatized on February 2013 and was sold to Papo Maritime Ltd. Owned by the Nakash brothers (75%) & Others (25%).

The new owners are committed to expand the volume of activity of the port, especially containers.

Fields of Operation

The ports' primary fields of operation are bulk export, and motor vehicle import from the Far East. The port has a lot of storage areas for imported vehicles and accompanied infrastructure, while strict measures are being held to guaranty speedy and quality service, safety and security. In recent years the port also operates in import of cattle from the east and also in fields of containers and passenger ships in the gulf.
