

Ginegar Plastic Products Ltd.

Line of Business

Cover Films for
Agricultural Applications

Established

1969

Leading Executives

Mr. Moshe Ron
CEO

Ms. Nurit Asraf
CFO

Ginegar Plastic Products Ltd. is Israel's largest developer and producer of cover films, nets and thermal screens for agricultural applications. Ginegar's agriculture cover films and nets rank among the leading cover products for greenhouses and net houses, mulch for soil protection and disinfections. The unique mechanical, optical and thermal characteristics of Ginegar's Products ensure greater durability, excellent resistance to hostile weather conditions, controlled light penetration, better dust resistance and reduced pest activity.

Main Activities

Design, development, manufacture and marketing of sophisticated multi-layer P.E. films for agricultural and industrial use.

Five Layer Technology

In 2001 Ginegar installed the first (and only one in the world) large-size five-layer extruder. This machine has been working 24 hours a day, seven days a week ever since its acquisition except for obligatory, once a year, check up and maintenance. In 2006 Ginegar added a Five-Layer extruder, and in 2010 installed the largest Five-Layer extruder in the world, to produce up to 18M width. Ginegar can unhesitatingly say that if a competitor produces a sophisticated greenhouse cover using a modern three layer extruder, the company is able to produce a superior version of the same on its five layer machine.

Materials

Most of Ginegar's production is based on polyethylene and its derivatives LDPE, HDPE, EVA, LLDPE.

Main Products

Greenhouse Covers: A family of thermal films combining new and advanced features.

Mulch Films: A diverse line of ground cover films, which enhance the conditions in which the crops develop, and also ground cover films, which play an active role in soil fumigation.

Geomembrane Films: Very thick black HDPE/LDPE films designed for reservoir and pond liners and other applications for the prevention of the percolation of liquids into the soil.

Barrier films and Impermeable Films: Barrier to gases and moisture.

Plastic bags and sacks

Aluminet: Thermal screen for microclimate improvement in greenhouses, it provides diffused light to the plants, protects from direct sun radiation and saves energy

Anti-insect nets: Work as Physical barrier, OptiNet blocks insects by Optical protection too.

Anti-hail nets: In different colors for orchards and vineyards

Chromatinet: Wide range of colored nets controls vegetative growth by changing the light spectrum the plants receive

Shade nets: Black or white to protect from sun radiation

Expert Agronomists & Other Professionals

The expert agronomists of Ginegar's R&D Department provide support and solutions for all types of crops in any climatic conditions. The Ginegar Product Development Team, made up of experienced agronomists, plastic technicians and engineers, acquired this know-how through decades of experience in the field as well as on the production floor in the plants at Kibbutz Ginegar, Nir Yitzhak, Neot Mordekhay in Israel, and in Brazil as well.

Customers

Ginegar exports to more than 40 countries worldwide.

Seeking

Distributors for agricultural inputs, entrepreneurs in the agricultural sector
