

Good Energies

Line of Business

Laser treatment medical device.

Established

2007

Good Energies is the developer of B-Cure Laser line of products, innovative portable soft laser medical devices, for home use.

The flagship product B-Cure Laser represent the elite of LLLT technology, with remarkable success in the treatment of pain, orthopedic conditions and skin conditions – 3 clinics in one device – pain, orthopedics and dermatology clinics.

The product has a patent pending revolutionary technology, bringing the healing power of big-clinic machines to the comfort of home care. B-Cure Laser was launched successfully onto the Israeli market and is in the early stages of penetrating global markets. Following the success of B-Cure Laser, the company has developed additional pre-designated low-level laser technology devices:

B-Cure Laser Dental Pro

A Soft-laser device used post-op and post-treatment, for pain, wounds and inflammation, such as: implants, extractions, gum surgeries and root canal treatments, and for the treatment of chronic conditions, such as myofascial pain disorder and periodontitis.

B-Cure Laser Sport Pro

A medical device for orthopedists, chiropractors, physiotherapists etc., treating orthopedic pain and sports injuries. B-Cure Laser Sport Pro is used by the Wingate institute for treating professional sportsmen and was declared by the Israeli Olympic Committee as the official device, treating the Israeli Olympic delegation for the 2016 Olympic Games in Rio.

In 2015-2016, the company is expected to expand further the products line and launch exciting new devices with revolutionary business models: for veterinary applications, for professionals treating

orthopedic and pain conditions, and for dermatologic care.

A new B2C device - **B-Cure Laser Sport**, will be launched early 2015, targeting the growing market of sport lovers suffering from chronic and acute sports injuries and orthopedic pain.

Innovation

The B-Cure laser products display the power and full coherence of a clinic's heavy-duty machine in a safe and easy-to-use portable device. The unique combination of the device's patent and technical specifications - full coherence of the laser beam over an area of 4.5 cm², plus the wavelength and the power of the beam - 808nm/250mW, enable the laser beam to penetrate effectively deep into

the tissue and induce high quality and fast recovery from orthopedic conditions, pain, injuries, inflammation and wounds. The products are class 1 lasers, and can be sold OTC.

Good Energies is involved in several clinical trials with leading hospitals and health institutes to test the efficacy of the devices for the treatment of diabetic wounds, muscle pain, TMJ and mucocitis.

Advantages

B-Cure Laser provides an ultimate answer to the constantly growing demand for home medical treatment, and the combination of home treatment and in-clinic treatment, for better results and healing.

- Natural and non-invasive healing
- Safe to use
- Enables daily treatment at home
- Light, portable and rechargeable
- Israeli patent + IP
- 4.5 cm² coherent laser beam
