

ImageSat International N.V.

Line of Business

Satellite Imagery Services

Established

1997

Leading Executive

Mr. Avi Winter
CEO

ImageSat International N.V. is an international company and a commercial provider of very high resolution satellite earth-imagery collected by its Earth Remote Observation Satellites (EROS). The company offers exclusive service packages, including exclusive use of the EROS satellite over a designated footprint. Founded in 1997, ImageSat is owned by Israel Aerospace Industries and European investors.

Highest Quality Services

One of the few global service providers in the very high resolution satellite imagery niche, ImageSat is distinguished by:

- Exclusive service packages, including exclusive direct use of the EROS satellite over a designated footprint, this service includes direct and independent tasking and reception
- Flexible imaging parameters
- International operation
- Fast image acquisition and delivery
- Competitive pricing
- No Risk - Pay only for services received

Diverse Applications

Among the diverse applications for EROS imagery are:

- National Security
- Homeland Security / Border Control
- Infrastructure Monitoring
- Mapping
- Environment and Disaster Control

EROS Satellites

EROS satellites are lightweight LEO satellites with a single electro optical camera system. EROS satellites acquire high-resolution panchromatic image data. EROS satellites are designed to maximize operator flexibility in the creation and adaptation of the daily image acquisition plan. EROS's high maneuverability enables it to be quickly pointed to image customer-specified sites on Nadir or at oblique angles of up to 45 degrees. Oblique viewing enables the satellite to view virtually any site on earth as often as two to three times per week.

The orbital period of the EROS satellites is 94minutes. Each satellite completes approximately 16 orbits around the Earth every 24 hours, with two daylight passes per day through the footprint of a typical Ground Receiving Station.

Successfully Launching Satellites

On December 5, 2000 ImageSat successfully launched its first satellite, EROS A, aboard a Russian Start-1 launch vehicle. In so doing, ImageSat became the second company in the world to successfully deploy a commercially owned high-resolution imaging satellite.

On April 25, 2006 ImageSat successfully launched its second satellite, EROS B using the same type of Start-1 launcher. Both satellites are working as expected and have a life expectancy of more than 14 years from launch.

An advanced Eros C Satellite with significantly improved imaging capabilities is now in production.
