

Meptagon

Products

Meptagon provides pre-fabrication and manufacturing of panels, cabinets, manifolds and sub-assemblies for flow and distribution of industrial gases and chemicals.

Decades of experience in the process industry combined with multidisciplinary expertise result in strong engineering and logistics capabilities. All solutions are tailor-made to customers' needs in accordance with strict industrial specifications. Products modular design and versatile architecture enable compliance with a wide variety of industrial applications.

With over 10,000 square meters of production space, including a class 10 clean room, Meptagon facilities offer scalable manufacturing capacity and cost effective solutions to widely diverse process needs.

Management, Construction and Execution

Meptagon's project management team constitutes a single point of on-site authority, with overall responsibility for the meeting of project objectives while remaining within budget and schedule. In addition, the team is responsible for adhering to health and safety standards, as well as quality requirements. Meptagon utilizes advanced project management tools, skills, and methodologies, thus empowering the entire team, making it more effective in the execution of its projects.

Meptagon's execution team and construction supervisors in the mechanical, electrical, and instrumentation areas have over 100 years of accumulated experience in contracting projects in the process industry.

Our 350 engineers, managers, experts, and professional employees will perform all of the required construction work, as well as its supervision.
