

mPrest Systems Ltd.

Line of Business

Command and Control Systems

Established

2003

Leading Executive

Col. (Ret.) Natan Barak
Founder, CEO

Superior Solutions for the Defense & Aerospace Arenas and Homeland Security (HLS)

Leading C² system house that developed the command and control system of the "iron dome".

mPrest Systems is a recognized market leader in the design, development and implementation of high-performance C⁴I solutions for the defense & aerospace, homeland security and civilian arenas. mPrest proprietary software suite enables the integration of large amounts of input data from a variety of sources (sensors, devices and other systems) and coherently manages a wealth of applications on interactive displays. Seamlessly integrating all C⁴I elements & sensors, our software

capabilities reduce the time required for system development. Utilizing our systems cut the operational response time and enables each level in the chain of command to be focused on the success of their critical missions and significantly enhance the decision-making process.

mPrest developed a unique generic C&C engine-based operational system which allows **REDUCING** development **TIME** while **INCREASING** system **RELIABILITY** and **REDUCING** project **RISKS**.

mPrest unique generic C² engine-based operational system makes it easier to connect weapons & sensors and also provide the customer an easy to operate build-in state-of-the-art decision making rules engine.

Defense & Aerospace Arena

Backed by a wealth of operational experience, our field-proven software platform provides the required robust C&C functionality and system intelligence for: **land, air (ADCCS, ASP), and sea (COAST AND SEA WATCH C&C) forces.**

- Delivering complete mission-critical situation awareness and fire control capabilities necessary for successful military operations, mPrest's patented algorithms and state-of-the-art infrastructure are used at the core of many C⁴I platforms. Provide Tactical C&C system to the battalion level
- Integrating of C&C, communications, procurement means and attacker weapons

Our software suite enables the integration of large amounts of input data from a variety of sources (sensors, devices and other systems) and coherently manages a wealth of applications on interactive displays.

Our automated capabilities significantly enhance the decision-making process, dramatically cut operational response time and enable each and every echelon in the chain of command to focus their attention on the success of their missions.

Homeland Security (HLS) Arena

Backed by a wealth of experience, our proven platform delivers enhanced interoperable functionality for all forces engaged in the **management of crisis and emergency situations.**

- **Safe city**
- **Special forces C&C**
- **Border control**
- **Critical facilities protection** integration & management of Variety of means (cameras, radars, vehicles, access control, alarms, fire detection and more) **"system of system"**
- Connecting to existing systems and providing a complete solution for the customer.
- **Detection systems**, sensors monitoring and tracking fleet management system.

Seamlessly integrating all your C⁴I elements, mPrest Homeland Security solutions provide feature-rich, scalable and affordable systems. Offering a full suite of automated capabilities, mPrest enables operators to focus their full attention on successful event resolution.

mPrest – taking your Homeland Security C4I to a new level.
