Nextcom Group was founded in 1992 and is a publicly owned corporation traded on the Tel Aviv Stock Exchange. Since its inception, Nextcom has become one of the biggest, most stable, and valued companies of the communications and infrastructure industries in Israel. The company, at the cutting edge of technology, offers its customers full turnkey solution including engineering, planning, establishment, and maintenance of communications infrastructure for wired and wireless communication networks, while maintaining the highest standards of quality and service. Nextcom Group supplies customers in Israel and overseas with advanced solutions for provisioning voice, data, and video services utilizing broad range communications infrastructures, installing new infrastructures or migrating and upgrading current installations. Nextcom is experienced with all infrastructures copper, fiber and wireless with the most advanced protocols (IP, MPLS, WiMax, Wifi).

Among Nextcom's customers in Israel, one finds most of the major corporations: cellular companies, Cable TV providers, telecom companies, Internet providers, communications equipment companies, hi-tech companies, public institutions, security entities. Offering complete 7/24 support team that meets the most sensitive applications.

In Nextcom you'll find all the capabilities and

resources required for the establishment of communication infrastructures for wired and wireless networks, under one roof.

As part of the group, several subsidiary companies specialize in a variety of activities required for setting up a communications infrastructure and advanced communications networks – from the functional

specification phase, designing a technological solution, and planning the network according to the customer's needs, through supply of the equipment required for the project, and full application of the passive and active network up to the operating, support, and maintenance services.

TELECOM

With a broad range of specialties, Nextcom is competitive in the fields of wired and wireless infrastructure and communications networks. Its capabilities incorporate all stages of supply and construction of communication sites, FOC deployment, as well as the deployment and maintenance of advanced communications installations at the end-user's premises such as GSM, RF, SDH, DWDM, Microwave, WiMAX, Wifi, VOIP and IP/MPLS.

SOLAR ENERGY

Specializing in provision of services and turnkey solutions in the area of renewable energy, constituting a EPC engineering and comprehensive O & M services, for On-net and off-net solar energy applications.

GAS

Nextcom, via its daughter company BNEXT, operates in the natural gas fields as an EPC both in the transmission, distribution and plant retrofit to natural gas.

The company has experienced engineering team, licensing personnel, senior project managers, and

welders, who possess the highest certifications, professional skills and expertise in the field of welding, drilling and construction of underground infrastructures.

The company focuses on the management, planning, delivery and execution of projects in the field of gas and fluids transmission infrastructures.
