Nordia Springs is an international leader in the production of quality springs. We provide complete spring solutions and manufacture assemblies tailored to customers' needs. The company was established in 1935 and since then, has continuously been improving production processes. Today, we are marketing top quality springs for various applications worldwide. The company consists of 3 manufacturing plants with annual capacity of around 100 million compression, extension, torsion springs and 70 million rings, wire forms, flat and special springs.

Applications

We provide complete solutions for a wide range of industries including automotive, cellular, irrigation, agriculture, telecom, medical,

Engine Valve Springs

electronics, locks and furniture industries. The company is a major supplier of springs to the Israeli Aviation, Military and Security industries. More than 40% of annual production is for worldwide automotive industry, mainly for brakes, mirrors, actuators and engines.

Design & Development

Nordia Springs' engineering group works together with the customers to design springs according to their demands. Advanced CAD software aids in the spring's design assuring the most accurate and reliable performance. Our springs successfully meet requirements of the most demanding customers.

Advanced production

From the moment the order is received, a computerized system tracks the order from input, manufacture, quality control and final shipping to the customer. The springs are manufactured on modern CNC-controlled equipment for high accuracy and quality. Finishing and coating is performed according to customers' specifications. This highly efficient system assures that the customer receives the correct products, on time and in any requested quantity.

Product lines

The company manufactures industrial springs in ranges from 0.08 mm – 16 mm wire diameter, in different wire types (round, ovate, rectangular etc.). Flat forms and standing parts can be manufactured up to 3 mm thickness.

High Quality Standards

Nordia Springs puts much emphasis on quality assurance and control. The inspection laboratory is equipped with modern analytical and measuring equipment. The experienced personnel controls the production according to advanced methods of SPC, poke-yoke and in-process control, accompanied by detailed statistical reports. Products and manufacturing process comply with the

highest standards ISO TS-16949 (Automotive), ISO AS-9100 (Aircraft) and ISO 9001:2008

Customers world wide

Nordia Springs serves more than 600 customers in the USA, Brazil, Mexico, Germany, Poland, France, Hungary, Czech Republic, UK, Netherlands, South Africa, China, India and Israel.

Engine Valve Spring

During 2012 and 2013, we have been producing sophisticated engine valve springs at average rate of 800,000/month. The service involves with profound calculations of compatibility and risk.
