

SHL-ALUBIN Ltd.

Mr. Gal Segal
General Manager

Mr. Amir Gilad
Sales Director

Alubin forms a unique group in the aluminum production and finishing market. The company is an industry leader in the aluminum sector in Israel and one of the few companies worldwide which produces **magnesium profiles**.

Brief History

Alubin Ltd, established in 1958, was acquired in 1998 by SHL Ltd. that was founded in 1973.

Other important information

Experienced staff: Alubin has highly skilled staff including top managers and professionals from the aviation Industry.

Prestigious clients: The company's prestigious partners include leading Israeli construction and high tech companies. Alubin has partners in UK, Germany, Holland, Mexico and other countries worldwide.

Quality assurance: All the production processes in Alubin are controlled and inspected. Alubin is approved by the Israeli standards institute and it is ISO 9000:2001 certified.

Development department: Our developed systems for curtain walls, windows and aluminium doors are used in the most prestige projects over Israel and worldwide. Alubin windows, door and curtain wall systems are certificated and approved to the higher levels of the Israeli and international standards. Alubin technical knowledge is here for supporting our customers demand for developing new systems in the construction and other industrial fields.

The production plant extrusion department:

Four powerful presses extrude aluminum profiles in Alubin. The profiles used in all construction areas and in various industries; cars, aviation, air conditioning, solar energy, security medicine, furniture and more. Highly sophisticated technologies are continuously employed in quality assurance processes.

Magnesium profiles production:

Magnesium profiles are 30% lighter in weight than aluminum, while maintaining high performance typical to aluminum alloys. This makes magnesium profiles ideal for the aviation industry and other industries which require light-weight high quality metals. Magnesium is the metal of the future. magnesium profiles can also be welded, coated and painted.

Aviation industry:

Alubin established a daughter company named Aviron. Aviron is specialized in production of aluminium and magnesium profiles for the aviation industry. Aviron is certified for AS-9100. Aviron partners are leading national and international companies from the Aviation and military industries such as RAFAEL, EL-OP, ELBIT, IAI etc.

The coating plant: Alubin has an elaborate anodize line, two lines of polyester powder paint.

Finishing services: According to request, Alubin provides fabrication, punching, cutting, marking and packaging services, in addition to painting and anodize of the profiles. This is a meaningful added value which saves our customers much energy.

The die making plant: Alubin makes dies in house. This plant is growing rapidly to support the needs of a fast expanding industry. Highly skilled engineers and workers draw the dies in accordance with client's needs. After approval of the drawings, the dies are manufactured in the plant, using the highest quality machines available. This procedure allows to quick die making in urgent cases. Alubin produces between 100-150 dies a month.

Seeking

Joint venture capital and strategic International partners for distribution Aluminium and magnesium profiles systems worldwide.
