SIGMATEK Advanced Technologies Ltd. [SAT] has been active in Communications and Navigations system since its inception in 1988.

Experienced Personnel

The company's top personnel have years of experience in the field of C3I and ATC systems, and this makes SAT the leader in the field for both local customers as well as International parties.

Air Traffic Control systems

SAT is an expert in the design, manufacturing and delivery of Air Traffic Control systems, with unique proven expertise in the Mobile Air Traffic Control systems. SAT designed and delivered systems that serve various customers around the globe, in full compliance with ICAO recommendations.

Fully Autonomous Systems

Each such Mobile Air Traffic Control Tower is a fully autonomous system with all the systems needed for extended 24/7 operation in remote areas. This includes VCCS, G/A V/U Radios, G/G Radios, Digital Recorders, Meteorological Systems and ancillaries.

Diverse Systems

Systems can vary in size and complexity to match customer needs and modes of operation. SAT has

delivered C3 systems to customers that cover a wide spectrum from HF to EHF with Voice, Video and Data applications. The delivered systems included all the building blocks from radios and antennas, switching systems, user terminals, audio accessories, recording devices. We have delivered systems for Marine applications such as GMDSS systems, Command and Control centers for Ground/ Air/ Naval applications. SAT has extensive knowhow in Voice Control and Switching systems, both in legacy TDM and the newest VoIP / RoIP solutions.

Quality Assurance

SAT is ISO-9001 certified company and treats Quality issues as top priority to assure customers reliance and satisfaction with our delivered systems.
