

## Next Generation Website Protection

**Foresight** provides an innovative and unique cloud based solution for one-click cyber continuity. Using **Foresight** solution, web site owners can now ensure cyber continuity with no interruption to the web site availability. In addition, **Foresight** offers an immediate response to web site downtime, disaster recovery, peak-time load, distributed denial-of-service and cyber-attacks – using a one integrated and cost effective solution.

**Foresight** solution continuously replicates and synchronizes any number of given web sites into “shadow sites”, which are deployed to a global cloud platform and used as a highly durable, secure, load resistant backup sites and front end sites.

**Foresight** web sites maintain constant network presence, with extreme load durability (DDoS, Peak Time Load, etc.) even when primary web site is down.

Using **Foresight**, governments and private organizations ensure constant availability of critical web content and services to the public, especially in times of disaster.

**Foresight** is installed on government, municipal, banking, credit, insurance, critical infrastructure, manufacturing industry and mass media enterprise web sites. Customers are using **Foresight** technology, both on premise and as a cloud service, as a highly secure and durable front-end or as a backup site for their mission-critical and content-critical web sites, with its effortless provisioning, deployment, monitoring and seamless integration with every known web platform.
