Development, design and production of parts, components and platforms made of composite materials, for the various needs of the aerospace industry.

Our fields of expertise are:

- Aerospace and UAV platforms & components
- Radome antennas and reflectors
- Re-engineering from aluminum to composite

Years of accumulated experience with composite materials, improved and innovative manufacturing methods and processes, specifically designed to meet customer needs and demands.

From prototyping to serial production, Aero Sol delivers the optimal solution for your project with a commitment to produce the best quality right on time.
