Chaban Group was founded in 1995 by a group of the best development people in Israel, veterans of Elbit, the Air Force and the Navy. The group's goal was to set new standards in the development and production of test equipment and advanced medical systems for the military and civilian markets, while maintaining uncompromising quality control and service. The result was a high-tech company with much know-how and experience for developing, manufacturing and marketing specialized and universal automatic test equipment for military systems, and extending the business to the civilian and medical electronics industries.

Understanding Market Needs

Chaban Group, through its human assets and deep comprehension of the market's needs, has become a leader in Israel in the development, manufacture and marketing of test equipment to the military and civilian markets. The Group provides a rapid response to all the applications needed by the customer from: requirement definition; development of hardware, software and mechanics; documentation, literature, complete procurement, assembly, testing and delivery to the customer; training and further support during and after the warranty period.

Competitive Advantage

Large bodies in Israel and overseas have discovered the latent advantage in continuous, accessible assistance from Chaban Group's experience as a reliable and foremost subcontractor.

Customers can advance towards a new technological era, and benefit from a winning combination of high quality technological progress individually tailored to specific needs and perfect service.

TeleFlight Technologies Ltd.

Chaban Group recently associated with TeleFlight Ltd. to get into a new area. TeleFlight Technologies Ltd. founded in 2004, is a privately owned technological company specializing in micro-electronics with expertise in development, manufacturing, integration and marketing of unmanned aerial sub-systems. The company focuses on development of products mainly to the unmanned systems market. TeleFlight provides proprietary breakthrough technology based products, technological capabilities and services to the unmanned systems and home land security markets. Products are for end-users and integrators.

Chaban Technologies (98)

The division is responsible for the group's development assignments and combines engineering capabilities in the development of hardware, software and mechanics to develop varied test equipment. All the division's products are based on off-the-shelf items and on universal, standard and specialized products that were developed and manufactured at Chaban. The variety of products enables customers to choose optimal solutions for support at all developmental phases of the final product, prototypes, transfer to production, and support at end user's sites.

Chaban Medical

The medical division extends the support capability of the group and provides a response to the growing demand for an independent and comprehensive subcontractor to manufacture electronic systems to the most stringent medical standards, such as ISO13485/8. The advantage of Chaban Medical lies in its superior engineering capability, affording customers proven production capability with support for requirements of upgrading, converting and improving products.
