**M**agna, as a security provider company, developed during the last few years various configurations of passive radar, for intruder detection and perimeter protection.

**Our products are defined as unique technology which achieves full detection for any kind of intruder while keeping an ultra-low false alarm rate.** The system using advanced filter software that developed in Magna.

## The Features

- Stereoscopic technology that giving the radar serious advantages when compared to similar systems.
- Ultra-low false alarm rate (less than one per 24 H).
- Very high probability of detection (above 99%).
- Active 24/7, even in hard weather conditions.
- Completely automatic (no operator required for monitoring).
- Versatile and easily adaptive to various regions.
- Designed for outdoor and indoor applications.

## Line of Products

**Static system** - a virtual wall that is capable to seal a desired region, regardless of an existing fence

**Field deployable system** - the smallest stereoscopic electro-optic system in the world, one man installation, deployed within 15 minutes at any field.

## HLS

- Airport security
- Sensitive sites security
- Nuclear reactors perimeter protection
- Police and prisons
- Major transportation routes
- Infrastructures protection

## Military

- Border and costal surveillance
- Check point and cross section
- Intruder detection
