Phantom Technologies provides a variety of jamming solutions for all RF based communications applications such as Cellular, Wi-Fi, tactical communications, SAT based phones, etc.

The company develops and manufactures its systems in all sizes and in multiple configurations – from low power to extreme high power jammers, for stationary, man pack, vehicular and complete compound area coverage scenarios.

The company offers both off the shelf solutions and customized products to meet special client requirements.

The company's line of products includes also internally developed digital receivers used for conditioned jamming systems, counter surveillance systems and SIGINT applications.

Advanced Jamming Solutions

Since 2002, PHANTOM TECHNOLOGIES LTD specializes in designing, developing and manufacturing of multipurpose jammers. The company's diversified line of products covers all known

communication bands from the VLF band to the C band. All systems vary in size and configuration to meet various operational needs and applications such as stationary, man pack, mobile and airborne.

PHANTOM TECHNOLOGIES LTD holds an R&D team that constantly implements the latest cutting edge transistor amplifier and digital processing technology. The R&D team is also in charge of customizing company products to client needs and specifications while enhancing performance and system reliability. PHANTOM TECHNOLOGIES LTD tests 100% of all products manufactured, using state of the art measurement equipment.

PHANTOM TECHNOLOGIES LTD provides after sales technical support and grants a full year warranty for all products.

PHANTOM TECHNOLOGIES LTD is a formal supplier to the IDF, Special Forces, prison authorities and government agencies, and has recurrent clients in 4 continents and over 50 countries.

Main Products

Cell Phone Jammers (CCJ & SMJ Series)

The CCJ Jammer is a compact small sized system designed for blocking all cellular networks and standards in the world.

The CCJ jammer is a classic solution for meeting rooms, briefing rooms all the way up to conference halls, entire office floors and any other large defined area such as jails or large secured compounds that need to be negated from cellular service.

The unit is controlled by a Microprocessor for PLL programming.

The CCJ device transmits a noise signal which cuts off all cellular communication between the mobile phone and the base stations.

The SMJ Jammer is based on digital technology hence can be programmed for specifically jamming BCCH channels.

Based on this technology, jamming distances achieved are 10 fold compared to analog technology.

The SMJ Series is designed especially for prison jamming applications. The result is that all cellular signals in the vicinity of the jammed compound will be totally blocked and the cell phone will not be able to receive or make calls.
