Business-Driven Risk Management Software for Cyber, IT and Critical Infrastructure Protection.

WCK provides risk management software for cyber security, IT and critical infrastructure protection. It uses a clear and intuitive methodology that eases the daily workflow of risk management and compliance, uncovers hidden vulnerabilities and streamlines mitigation activities and workflow.

The System Delivers

- **A Crystal-Clear Risk and Compliance Posture**
Encompassing IT, security and critical infrastructure, updated in real-time
- **Prioritized Mitigation Workflow**
Automatically-generated remediation plan, based on business criticality
- **Ability to Uncover Hidden Vulnerabilities**
That may threaten key business processes ... and all this within in in an extremely short implementation and delivering a quick return on investment.

WCK's intelligent risk engine and its underlying algorithms and unique risk assessment methodology (EESA™) performs automated risk analysis which includes: analyzing the interdependencies between threats, assets, business processes and organizational units, risk correlation around assets and smart risk aggregation.

The WCK solution was designed to cover traditional IT environments, as well as the unique needs of protecting critical infrastructure and control systems.

About WCK

Our tens of years of experience in information security have made us acknowledged security and compliance experts.

We work with leading financial institutions, government bodies and enterprises around the world in implementing and analyzing risk and compliance solutions, helping them reduce their risk exposure from cyber threats.

WCK customers are medium to large organizations at risk from cyber attacks in the following industries: financial services, utilities and infrastructure, pharmaceuticals, healthcare, telecom, government and more.

Thought Leadership

WCK's unique risk assessment model EESA™, has been acknowledged by international security agencies and research bodies as an essential enhancement to security standards such as ISO 27000 and NIST 800-53.

It has been selected as a leading risk assessment methodology by:

- the Assessment of Critical Infrastructure Protection (ACIP) project
- the Center for European Policy Studies (CEPS)
- the European Network and Information Security Agency (ENISA).

HOLISTIC SECURITY POSTURE
Managing the entire life-cycle of IT, cyber and physical security risk assessment
