Whitebox Security is a leader in the field of Identity and Access Governance. The company pioneered Intelligent Access Governance, which combines the best of both identity intelligence, and identity & access governance in WhiteOPS™, its key Access Governance platform. The company has been named one of the ten most innovative security companies by the RSA® innovation sandbox, as well as a Gartner's cool vendor in 2012 and was shortlisted for 'best IAM product' category by the SC-Magazine Europe awards in 2012.

What is Access Governance?

Today's fast-paced business-environments requires employees to have access to information, where and when they need it. This leads to a constant struggle in which organizations are trying to ensure that employees will have just the needed access, not less and certainly not more. Simply put, Access Governance is a technology to help you deal with this struggle, by answering the following questions: 1) Who did what? 2) Who has access to what? 3) Who reviewed and approved what? 4) Who should have access to what? Trying to win this battle with no suitable means to collect, analyze, manage and produce true cross-enterprise insights, is practically impossible.

What makes Access Governance Intelligent?

Activity & Identity Monitoring

Have complete visibility over users' activities. Always know who did what, when, where and how.

Full Audit-Trail

Every monitored activity is enriched with details from various in-place security and HR systems.

Entitlements Integration Kit

Automate entitlements collection from any application across the organization. No coding needed.

Data Classification

Find-out where your sensitive data resides and don't lose track of it ever again.

Owner Identification

Identify your resources' true owners, delegate authorities to give the owners the needed independence.

Usage Profiling

Analyze users' activities to create usage-patterns to base on, in policy creation and anomalies detection.

Unified Access Policies

Continuously search for access, segregation-of-duties and controls violations. Respond in real-time.

Access Certification

Usage-aware access certification processes recommend the reviewer on highly probable excess access.

Requests Automation

Self-Service portal, integrated with powerful what-if engine to proactively predict violations.
